

EnergyConnect

Out Of Hours Construction Notification

December 2024

Elecnor Australia (formerly SecureEnergy) has been contracted by Transgrid to deliver part of EnergyConnect with the construction of 700km of new power lines from the SA border to the regional energy hub of Wagga Wagga. The project will connect the electrical grids of New South Wales, South Australia, and Victoria, improving reliability of our nation's energy supply.

Construction Activities

The EnergyConnect project team are continuing to advance construction activities on the Eastern section of the alignment at the Dinawan substation and camp, near Bundure.

The approved hours of construction works are:

- 7am to 6pm Monday to Friday
- 8am to 1pm Saturdays
- At no time on Sundays and NSW Public Holidays.

Work outside approved construction hours

Works outside approved construction hours are planned for the period 1 January 2025 to November 2025, to ensure works are carried out safely and to minimise disruption to the community.

- **Works will take place, weather permitting Monday to Sunday 4:00am to 9:00pm (including Public Holidays).**
- **Night works will take place, weather permitting Monday to Sunday 6.00pm – 7.00am (including Public Holidays).**

Substation construction and camp activities

- **Substation Construction:** ongoing construction of substation complex.
- **Site Maintenance:** maintenance of Dinawan camp access point, access road and laydowns.
- **Camp Management:** general camp activities including food deliveries and forklift movements.
- **Camp Logistics:** potable water for camp, wastewater treatment plant operation, dust suppression, and delivery of materials.
- **Laydown Activities:** accepting deliveries, management of laydown space, managing deliveries to the transmission line, including fuel and water, and servicing of vehicles.
- **Site Security:** 24 hours per day 7 days per week.

Traffic impacts

Temporary traffic changes may be in place to ensure the work zone is safe. Please keep to the sign posted speed limits, follow the direction of traffic controllers, and drive to the conditions such as slowing down in wet weather and poor visibility.

How could this impact you?

Generally, these works have been identified as having an inaudible noise risk due to the distance of sensitive receivers from the proposed work locations. However, where there are identified sensitive receivers including landholders from the proposed works, standard hours of work will apply.

All work will be carried out in line with the project's Conditions of Approval and Construction Environmental Plan.

How we're managing impacts

Site light, noise and vibration

Machinery and equipment will generate some light, noise and vibration. We will make every effort to minimise impacts by:

- Minimising the number of machines/vehicles to be used.
- Ensuring all machinery and vehicles are maintained and serviced.
- Turning off machinery and vehicles when not in use.
- Directing any temporary lighting down and away from homes.
- Fitting equipment with devices to minimise noise.
- Monitoring noise so we can manage any potential impacts and change our work as required.

Types of equipment

The type of plant and equipment you can expect to see at various stages of general construction are generators, compactors, concrete pumps, diesel generators, concrete vibrator, grinders, piling rig with impact hammer, piling drill rig, pressure washers, welding equipment, skid steer, lighting towers (solar), water carts, agitators, graders, rollers, mulchers, excavators, semi-trailers, telehandlers, Elevated Work Platforms (EVP), crane trucks, bobcat, dump truck, tip truck, concrete trucks, rollers, tractors, heavy-lift cranes, mobile cranes, site buses, prime movers, fork lift, diesel bowser, and additional light vehicles.
