

Construction Notification - Transmission line stringing Wagga Wagga

July 2025

ElecNOR Australia has been contracted by Transgrid to deliver part of EnergyConnect with the construction of 700km of new power lines from the SA border to the regional energy hub of Wagga Wagga. The project will connect the electrical grids of New South Wales, South Australia, and Victoria, improving reliability of our nation's energy supply.

Construction activities

The EnergyConnect project team are continuing to advance construction activities on the transmission line from Wagga Wagga to Dinawan, near Bundure NSW. We are commencing line stringing activities from the Wagga Wagga 300kV Substation at Gregadoo, working towards Holbrook Road, on the southern side of Wagga Wagga. Stringing crews will be installing drawing wire from **Monday 14 July 2025** and then pulling conductor wire from **Monday 21 July 2025**.

Our stringing crews will be crossing the following roads:

- **Redbank Road**, south of Boiling Down Road Intersection
- **Plumpton Road**, south of Boiling Down Road Intersection

The work will culminate in line stringing across Holbrook Road from **Friday 8 August** to **Friday 22 August 2025**, weather permitting, approximately 6km south of Wagga Wagga.

Work outside of approved construction hours

The approved hours of works are:

- 7am to 6pm Monday to Friday
- 8am to 1pm Saturdays

At no time on Sundays and NSW Public Holidays.

Works outside these standard construction hours are planned until December 2025 across the alignment to ensure these activities are carried out safely and to minimise disruption to the community. Stringing works across roadways will take place, weather permitting, Monday to Sunday 7am to 7pm including Public Holidays.

How could this affect you?

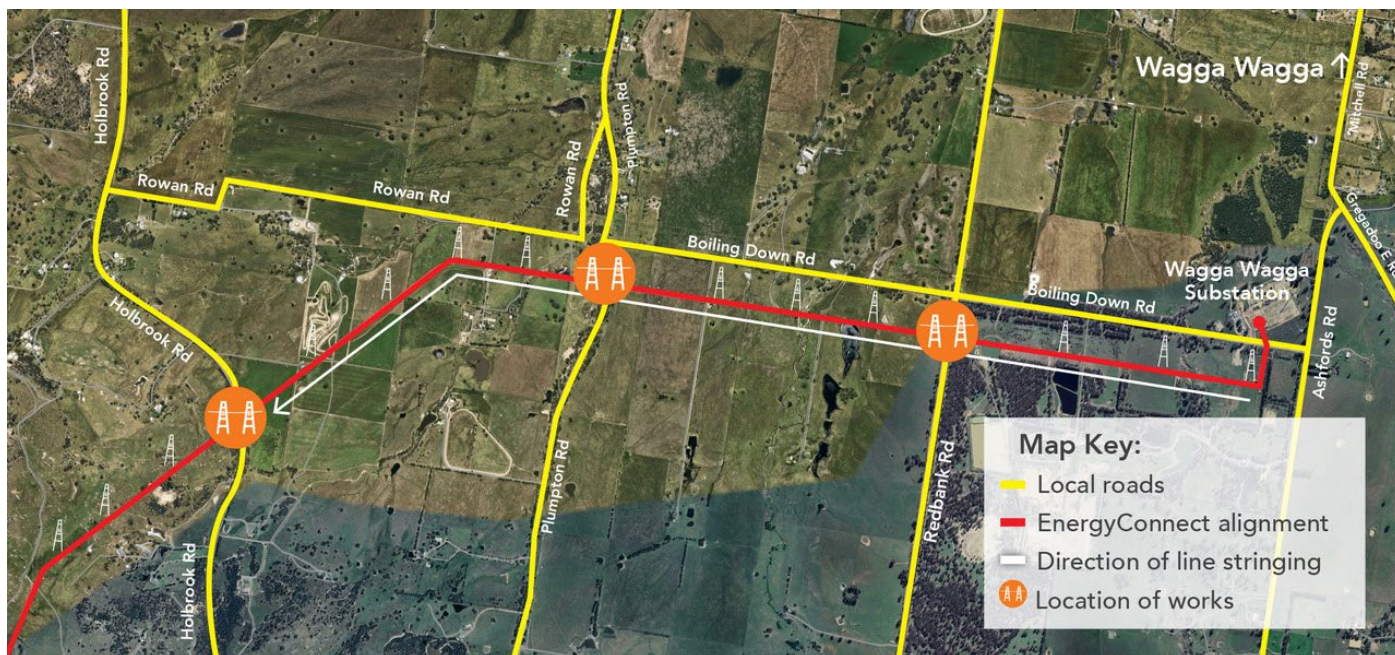

There will be an increased number of construction vehicles, plant and machinery operating in the area of the works and travelling to and from these sites. Temporary traffic changes will be in place to ensure the work zone is safe. Road users should factor this in when planning their journeys and allow for delays.

Types of equipment

The type of plant and equipment you can expect to see as part of the stringing works include steel cables, draw wire, conductor wire, insulators, elevated work platforms, rough terrain cranes, telehandlers, trucks and additional light vehicles.

All work will be carried out in line with the project's Conditions of Approval and Construction Environmental Plan.

Map showing the location of the work

How we're managing impacts

Traffic management

There will be traffic control in place at the affected locations while works are being carried out to ensure the safety of motorists and construction crews. Please keep to the sign posted speed limits, follow the direction of traffic controllers, and drive to the conditions. You can expect traffic management on these roads: Boiling Down Road, Redbank Road, Plumptre Road, and Holbrook Road.

Site light, noise and vibration

Machinery and equipment will generate some light, noise and vibration. We will make every effort to minimise impacts by:

- Minimising the number of machines/vehicles to be used
- Ensuring all machinery and vehicles are maintained and serviced
- Turning off machinery and vehicles when not in use
- Fitting equipment with devices to minimise noise
- Monitoring dust, noise and vibration to manage any potential impacts and change our work if required.

Contact Us

Please contact your dedicated land access officer in relation to property access matters and to raise any concerns you may have about planned works and potential impacts on farming operations during construction.
